TRACKER NUTRIENT TRAILER

Stay On Track

The Orthman Tracker Nutrient Trailer is a self-steering undercarriage designed to carry dry and liquid fertilizer tanks behind the Orthman 1tRIPr, and all other Orthman row crop equipment.

Heavy Duty Hitch

The steering linkage is an auxiliary connection, allowing the tank force to be transferred through the large 2-1/2" kingpin and welded frame, rather than through the steering linkage for increased strength and longevity.

High Axle Clearance

With over 30" of axle clearance, the Tracker Nutrient Trailer is perfect for high capacity fertilization post-emergence.

Large Tires

The Tracker Nutrient Trailer is equipped with large 480/80R50 tires for increased flotation.

Reduce Compaction & Crop Damage

The self-steering design of the Tracker Nutrient Trailer allows it to follow the path of the tractor and implement in front of it- this helps to reduce compaction and crop damage often found with most standard fertilizer trailers.

Here's How it Works

The 5-link mechanical steering uses the Ackermann steering principal, by which the inner wheel turns more sharply than the outer wheel. This, combined with a long hitch, allows the cart to mimic the travel of the leading implement with a higher degree of precision.

Adaptable To Your Operation

Available from 20" to 40" row spacing, the Tracker Nutrient Trailer can be built to fit your operation, and is adaptable to nearly all Orthman row crop equipment.

Available with 10-Ton, Dual-Product Dry Fertilizer System

Available with two 1,000 Gallon Liquid Fertilizer Tanks

SPECIFICATIONS

Fertilizer Options	10-ton dual dry or Dual 1,000 gallon liquid
Row Spacing	20, 22, 30, 36, 38, 40
Standard Tires	480/80R50
Axle Clearance	30"
Hitch Fore/Aft	2 x 1.5" pivoting pin
Hitch Side/Side	Single 2" pivoting pin
Steering Connections	Tapered ball joints

Rugged Pinned Pivot System

Heavy-Duty 10 Bolt Hubs

Large Jack with Integrated Storage

Easy Access to Dry System

Compatible with Orthman Row-Crop Planting and Tillage Products

The versatile mounting style of the Tractor Nutrient Trailer, allows it to be mounted to most Orthman row-crop tillage and planting products with mounting packages specific to each product group, allowing for many new options in fertilization capability and capacity in your operation.
